

Morning of the Earth Surfboards
2019 Japan Board Guide

Morning of the Earth Surfboards are hand shaped by Simon Jones from a small country shed on his farm, in the hills of Byron Bay, Australia.

The 70's inspired boards are crafted to capture the essence of the early period of Australian soul surfing, while giving the rider a beautiful feeling of glide and speed.

Simon worked with the legendary Michael Peterson (MP) to continue his legacy of boards, passing on his bottom shapes, outlines and fin templates so they could be enjoyed by surfers in the modern day.
